GIT - the stupid content tracker

"git" can mean anything, depending on your mood.

- * random three-letter combination that is pronounceable, and not actually used by any common UNIX command. The fact that it is a mispronunciation of "get" may or may not be relevant.

- * stupid. contemptible and despicable. simple. Take your pick from the dictionary of slang.

- * "**global information tracker**": you're in a good mood, and it actually works for you. Angels sing, and a light suddenly fills the room.

- * "goddamn idiotic truckload of sh*t": when it breaks
